# Organization of Lectures 3, 4

- Introduction Section
  - Recap from Week 1 (Lectures 1 and 2)
  - Announcements, course scope
- Main Section
  - L3: Trusted Decisions, Data
  - L4: Data Prep, Knowledge Graph
  - Project Discussions
- Concluding Section
  - About next week – Lectures 5, 6
  - Ask me anything

Credit: Dilbert

# Introduction Section

---

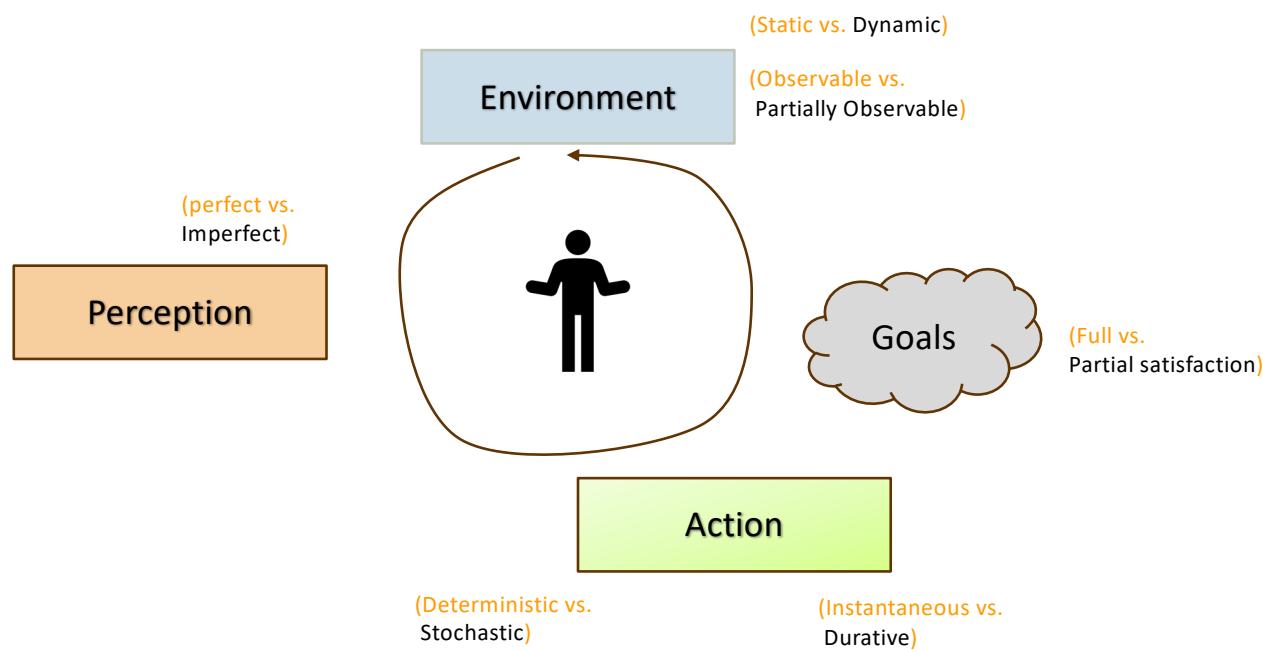

# Recap from Week 1

---

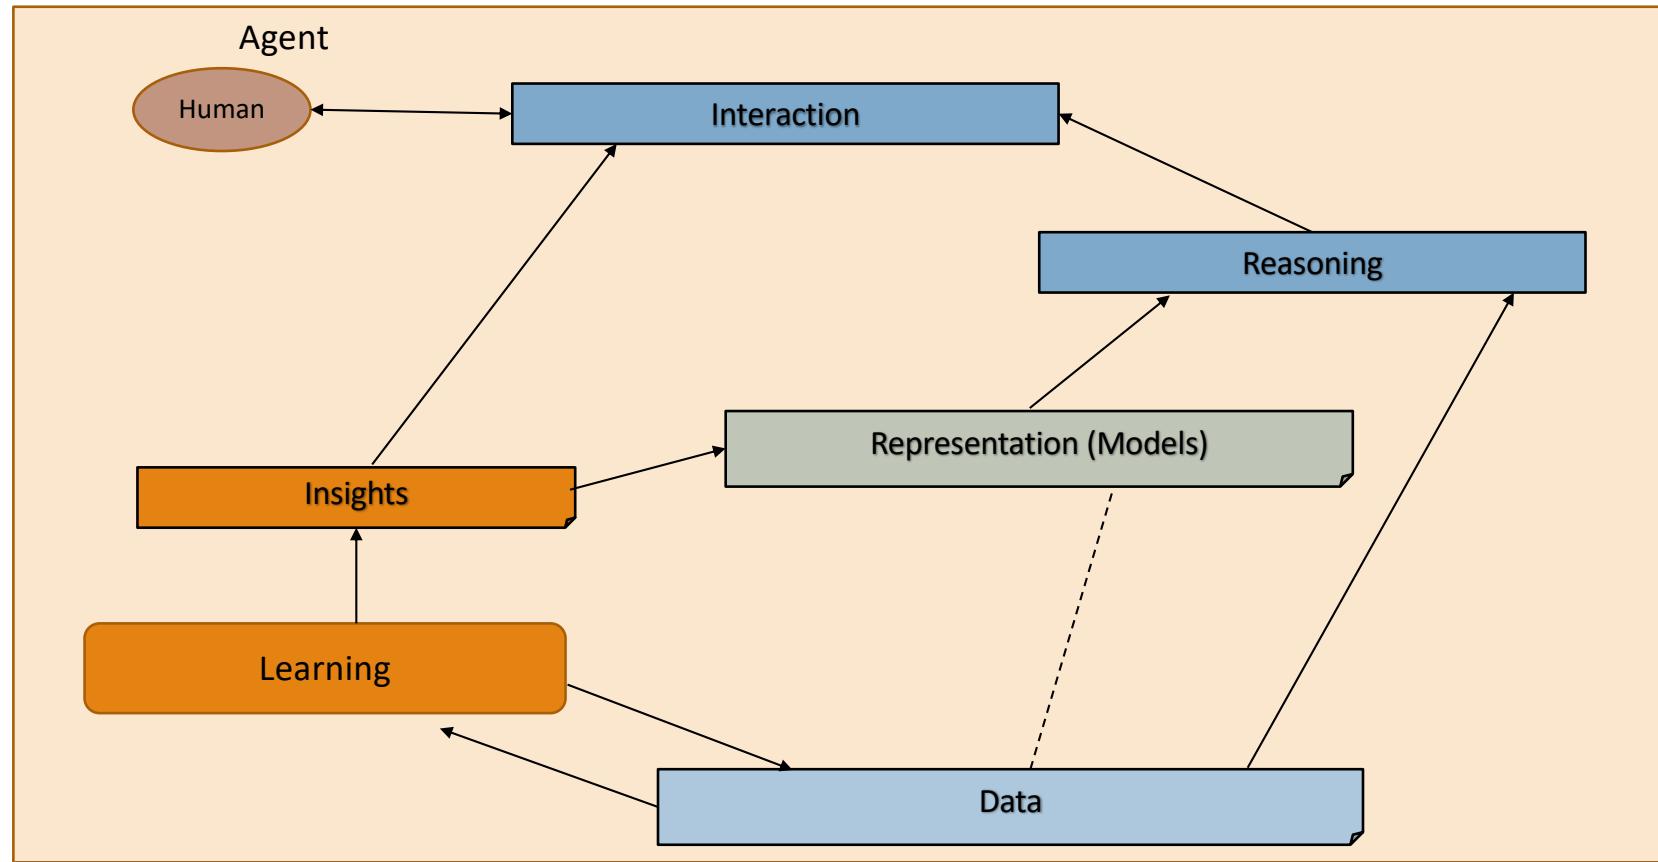

## Week 1: Introduction to Trusted AI

- Lecture 1: AI and Trust
  - AI as intelligent agent
  - Trust problem
  - Flexibility to adjust between AI methods and handling trust based on students' expectations
    - CSCE 581: AI/ ML topics and with a focus on fairness, explanation, Data privacy, reliability
    - CSCE 580: Classical AI topics and a focus on implementation

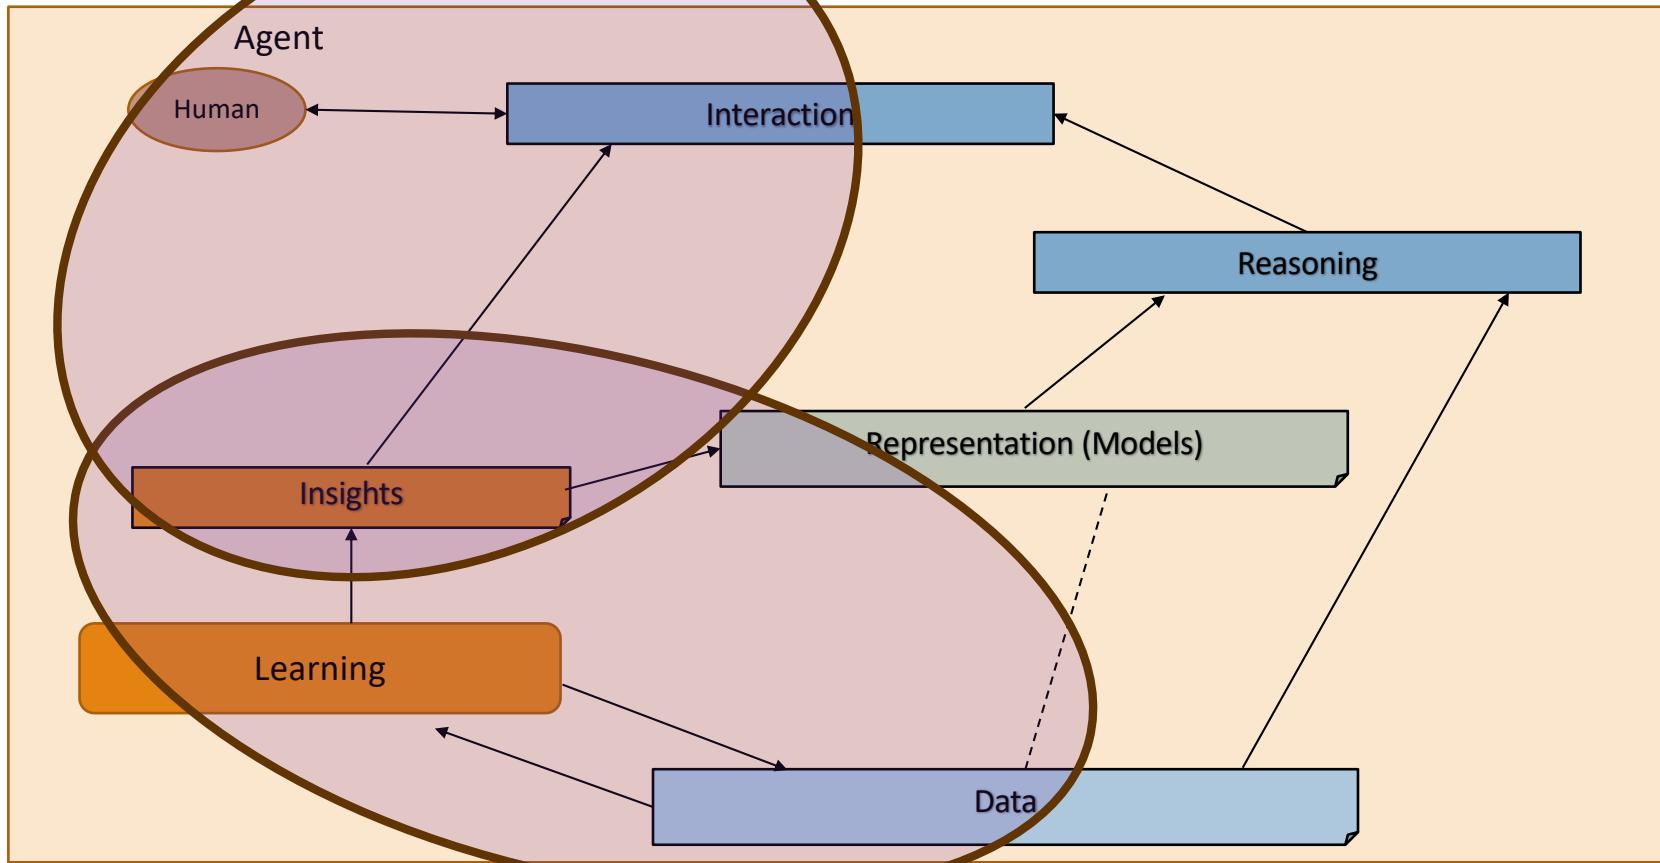

# Intelligent Agent Model

# Relationship Between Main AI Topics

## Relationship Between Main AI Topics (Covered in Course)

# High Level Semester Plan (Adapted, Approximate)

## CSCE 581 –

- Week 1: Introduction: AI and Trust
- Week 2: Background: Data and Organization for AI
- Week 3: The Trust Problem
- Week 4: Machine Learning (Structured data) - Classification
- Week 5: Machine Learning (Structured data) - Classification – Trust Issues
- Week 6: Machine Learning (Structured data) – Classification – Mitigation Methods
- Week 7: Machine Learning (Structured data) – Classification – Explanation Methods
- Week 8: Machine Learning (Text data, **vision**) – Classification,

### **Large Language Models**

- Week 9: Machine Learning (Text data) - Classification – Trust Issues, LLMs
- Week 10: Machine Learning (Text data) – Classification – Mitigation Methods
- Week 11: Machine Learning (Text data) – Classification – Explanation Methods
- Week 12: Emerging Standards and Laws, **Real world applications**
- Week 13: Project presentations
- Week 14: Project presentations, Conclusion

AI/ ML topics and with a focus on fairness, explanation, Data privacy, reliability

# TAI News

---

# #1 NEWS - Risks of AI in Schools **Outweigh** Benefits, Report Says

Link - <https://www.npr.org/2026/01/14/nx-s1-5674741/ai-schools-education>

Full report - <https://www.brookings.edu/articles/a-new-direction-for-students-in-an-ai-world-prosper-prepare-protect/>

---

- **Context**
  - Study includes focus groups and interviews with K-12 students, parents, educators and tech experts in 50 countries, as well as a literature review of hundreds of research articles.
- **Findings**
  - It found that using AI in education can "undermine children's foundational development" and that "the damages it has already caused are daunting," though "fixable."
  - **Pro:**
    - AI can help students learn to read and write
  - **Cons:**
    - AI poses a grave threat to students' cognitive development
    - AI poses serious threats to social and emotional development
- **Insight**
  - Learning is the process of self-discovery
  - Use AI to help student's learning (self-discovery), not replace learning

# #2 NEWS - Guest Speaker

---

<TBD>, by Dr. Kush Varshney

March 17, 2025

Dr. Varshney is an IBM Fellow based at the Thomas J. Watson Research Center, Yorktown Heights, NY, where he directs [Human-Centered Trustworthy](#) AI research. He applies data science and predictive analytics to human capital management, healthcare, olfaction, computational creativity, public affairs, international development, and algorithmic fairness, which has led to the Extraordinary IBM Research Technical Accomplishment for contributions to workforce innovation and enterprise transformation, and IBM Corporate Technical Awards for Trustworthy AI and for AI-Powered Employee Journey. He and his team created several well-known open-source toolkits, including [AI Fairness 360](#), [AI Explainability 360](#), [Uncertainty Quantification 360](#), and [AI FactSheets 360](#). AI Fairness 360 has been recognized by the Harvard Kennedy School's Belfer Center as a tech spotlight runner-up and by the Falling Walls Science Symposium as a winning science and innovation management breakthrough.

He independently-published a book entitled 'Trustworthy Machine Learning' in 2022, available at <http://www.trustworthymachinelearning.com>. He is a fellow of the IEEE.

Personal website: <https://krvarshney.github.io>

## #3 NEWS - FTC Finalizes Order With GM, OnStar Over Data Collection Practices

Link - <https://www.ftc.gov/news-events/news/press-releases/2026/01/ftc-finalizes-order-settling-allegations-gm-onstar-collected-sold-geolocation-data-without-consumers>

- **Context**
  - GM cars provided OnStar capabilities for emergency help since 1996 (<https://www.onstar.com/why-onstar/evolution-of-onstar-innovations>). Info like Automatic Crash Response, remote commands, and navigation/voice assistance
  - But shared user data with others!
- **Findings**
  - The final order approved by the **Commission imposes a five-year ban on GM disclosing consumers' geolocation and driver behavior data to consumer reporting agencies**. This fencing-in relief is appropriate given GM's egregious betrayal of consumers' trust. And for the entire **20-year life of the order, GM will be required to**:
    - obtain affirmative express consent from consumers prior to collecting, using, or sharing connected vehicle data (including sharing data with consumer reporting agencies), with some exceptions such as for providing location data to emergency first responders;
    - create a way for all U.S. consumers to request a copy of their data and seek its deletion;
    - give consumers the ability to disable the collection of precise geolocation data from their vehicles if their vehicle has the necessary technology; and
    - provide a way for consumers to opt out of the collection of geolocation and driver behavior data, with some limited exceptions.

## #4 NEWS - Laptop makers embraced AI. Then Microsoft left them hanging

Link - <https://www.pcworld.com/article/3028591/laptop-makers-embraced-ai-then-microsoft-left-them-hanging.html>

---

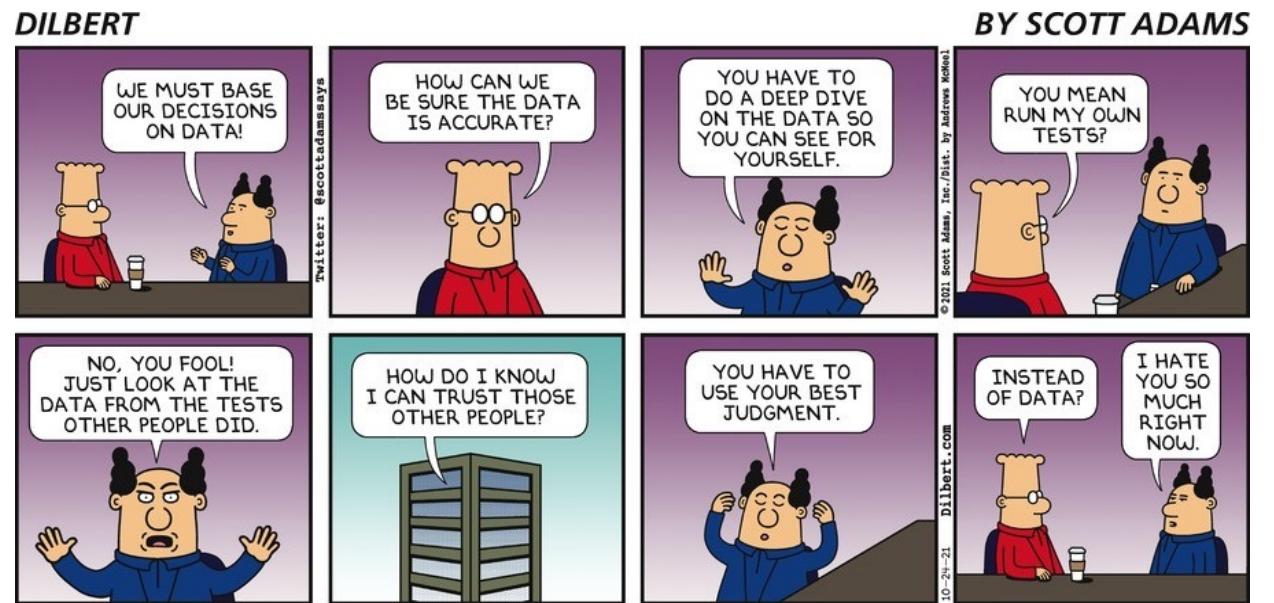

- **Context**

- Microsoft announced Windows 11 with have AI capabilities; required Neural (Network) Processing Units (NPUs) capable of at least 40 trillion operations per second (TOPS).

- **Findings**

- Developers can now use AI libraries to write AI apps that perform inference on GPUs, CPUs, or NPUs. It replaces the Copilot Runtime, which required an NPU on Copilot+ PCs
- Also, backlash over AI capabilities in PCs

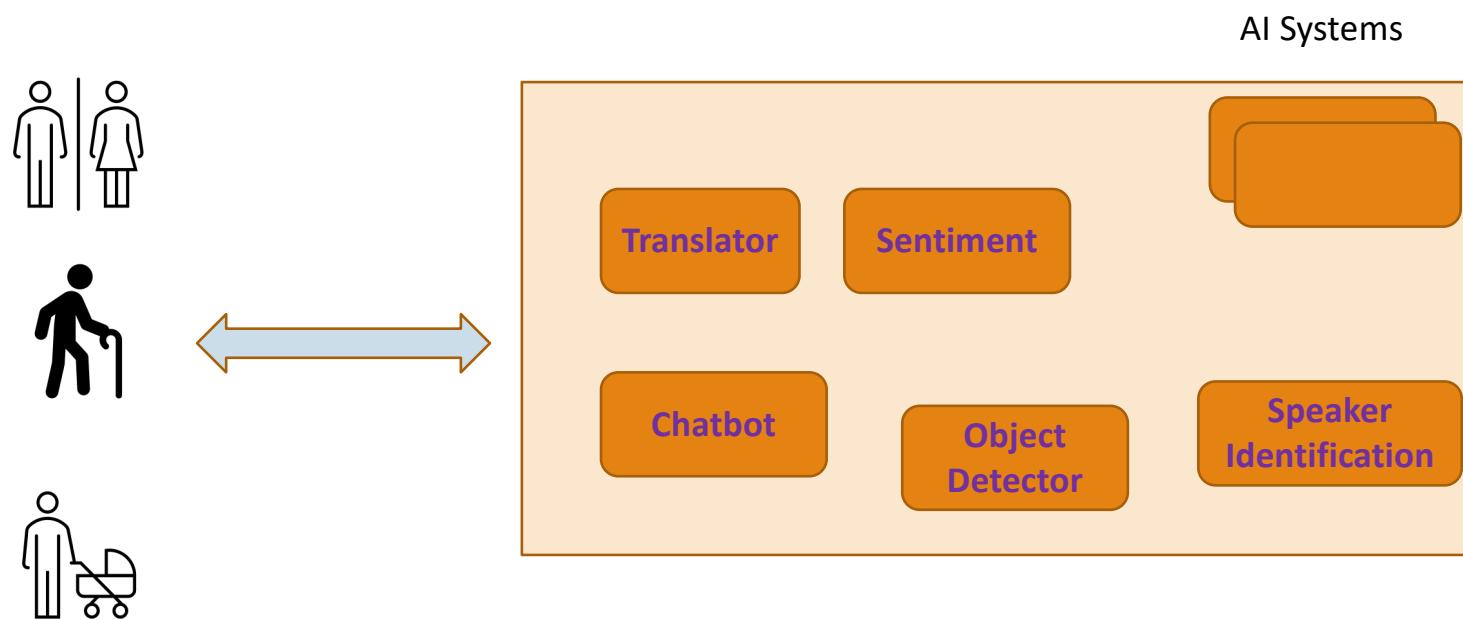

# Main Section

# AI and The Problem of Trust

---

# Technology and People

**Trust:** *Can people trust AI systems to perform capably, consistently, and with human values?*

# What are the Components of Trust (Technology)

---

1. Competent – does what it is supposed to do
2. Reliable – including, well tested
3. Upholds human values, social good
  1. Fairly and ethically used
  2. Adequate data management & preserves privacy
4. Allows human-technology interaction
  1. Explainable, transparent
  2. How does the system give its result?

**Reference:** Trustworthy Machine Learning, Kush R. Varshney, 2022  
<http://www.trustworthymachinelearning.com/>

# Components of Trust for AI

1. Competent – does what it is supposed to do
2. Reliable – including, well tested
3. Upholds human values
  1. Fairly and ethically used
  2. Adequate data management & preserves privacy
4. Allows human-technology interaction
  1. Explainable, transparent
  2. How does the system give its result?

	AI – Word Tag Cloud	AI – Image Search	AI – Self-driving Car	AI-powered Chatbot: Medical Guide
Competent	x	x	?	x
Reliable	x	?	?	?
Upholds human values	?	?	?	?
Allows human interaction	x	x	?	?

x: yes; -: not applicable; ?: questionable

## TDEBot

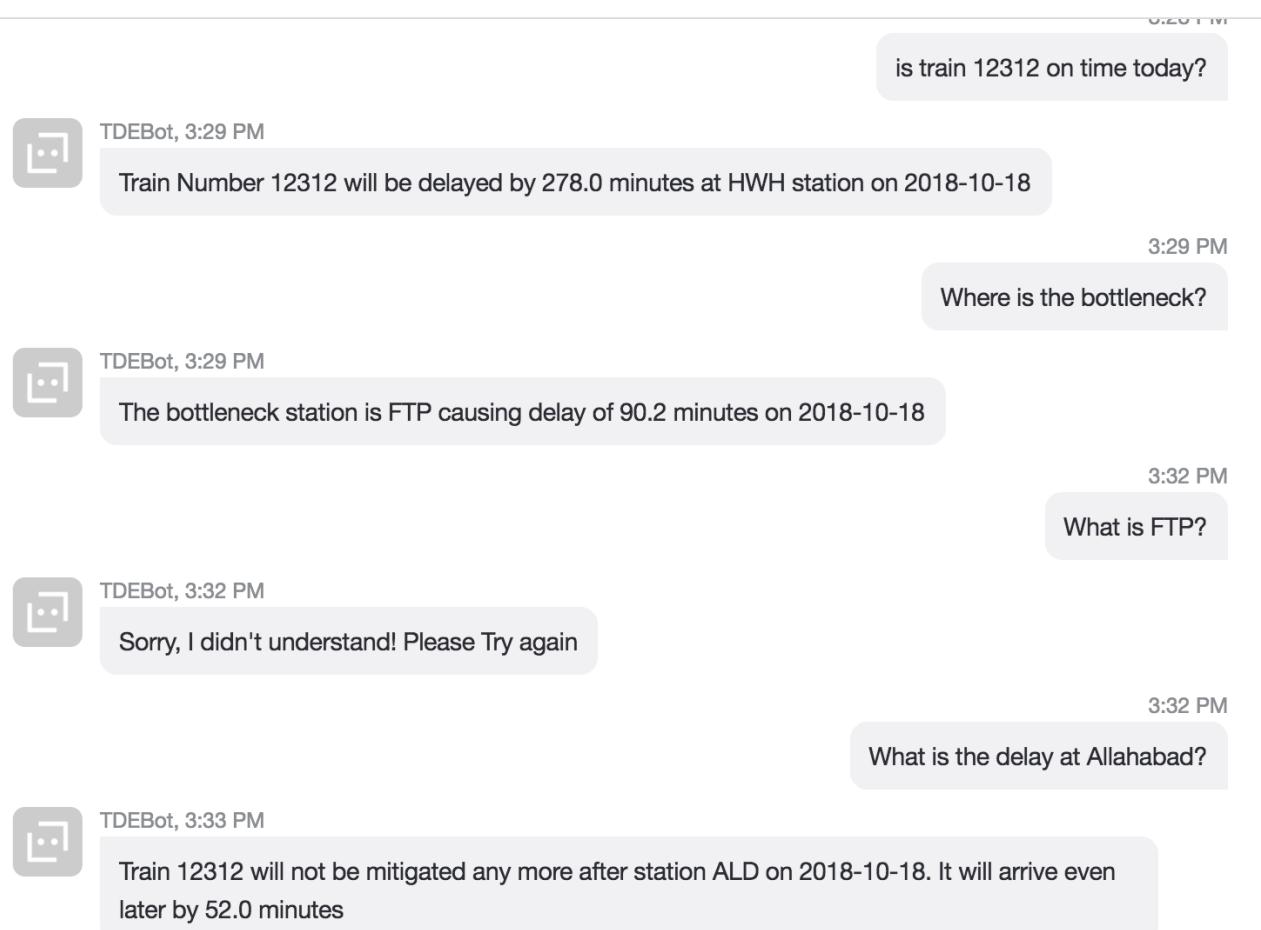

### Illustration: A Seemingly Innocuous Chatbot

#### Potential Issues

- Leak information
- Abusive language
- Complex response

#### References:

- 1.Ramashish Gaurav, Biplav Srivastava, Estimating Train Delays in a Large Rail Network Using a Zero Shot Markov Model, IEEE International Conference on Intelligent Transportation Systems (ITSC). On Arxiv at:  
<https://arxiv.org/abs/1806.02825>, June 2018 [Train delay, prediction]

# Takeaway – Trust in AI

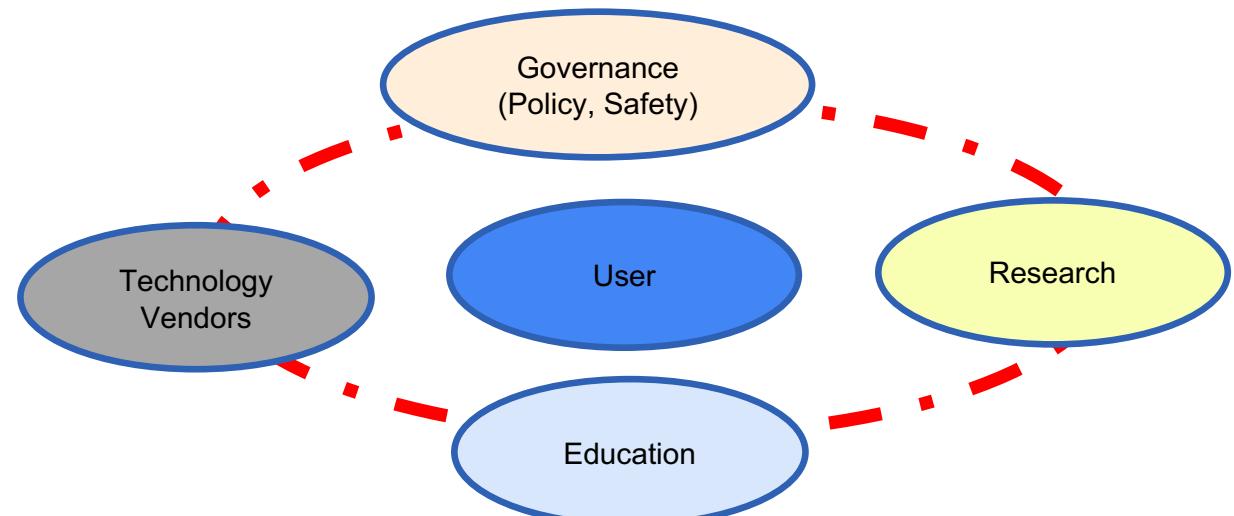

---

- Recall ingredients of a trusted technology – competence, robustness, human values, human-technology interaction.
- Operationally, in AI, trust improves with clarity on
  - **Data**
  - **Methods**
  - **Evaluation**
  - Positive, proven, impact in socio-technical ecosystem of usage (**Ecosystem** and “killer application”)

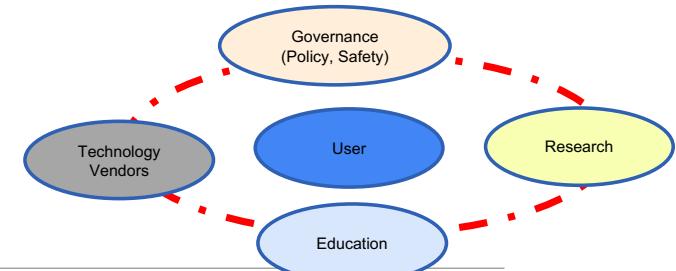

# Technology Adoption Ecosystem

Building user's trust in technology with:

- (Research and) Develop technology
- Educate users about the technology's usage
- Research on pain points to improve
- Help create governance, including regulations, to mitigate any consequent risks

# How to Lose Trust and Invite Next AI Winter

- Not revealing conflict-of-interest about access to data before testing a trained model [OpenAI/O3 and benchmarking controversy, ..] [Vitiates Data, Evaluation]
- Not submitting papers revealing approach for peer review [Many AI companies – e.g., OpenAI/ GPT, Google/ Gemini, Anthropic/ Claude ] [Vitiates Data, Methods, Evaluation]
- Not releasing models/ weights partially or fully [Most AI companies with proprietary models] [Vitiates Data, Methods, Evaluation]
- Not engaging with usability and interoperability issues, including regulation and data privacy [Most AI companies, many researchers] [Vitiates Data, Evaluation, Ecosystem]
- Not investing in standardization of hard benchmarks [AI companies and researchers cherry-picking benchmarks, not looking beyond] [Vitiates Data, Methods, Evaluation, Ecosystem]
- Avoiding social problems – which are great long-term business bets – for quick media hype .. [AI companies and researchers avoiding elephants in the room – elections, health, ..] [Vitiates Ecosystem]
- Not sufficiently investing in AI education and public resources [situation slowly changing] [Vitiates Ecosystem]

# GenAI Trust Controversies

---

- OpenAI's o3 and comparison with Theranos scandal (Jan 2025); showing exceptional results on EpochAI's FrontierMath benchmark while having access to much of the test data, and funding the same.
  - Claim of results, <https://www.nature.com/articles/d41586-025-00110-6>
  - Controversy: <https://analyticsindiamag.com/ai-news-updates/openai-just-pulled-a-theranos-with-o3/>,  
<https://content.techgig.com/technology/is-openai-misleading-the-ai-world-the-o3-benchmark-controversy/articleshow/117392266.cms>
- Earlier, OpenAI and other LLM companies gave up on providing information for elections!
  - Source: <https://openai.com/index/how-openai-is-approaching-2024-worldwide-elections/>
  - Rozado, D. 2024. The Political Preferences of LLMs. arXiv:2402.01789.

# Data – The Fuel for AI

---

# Motivation for Data Understanding

---

- Financial fraud detection in transactional data:

<https://www.kaggle.com/datasets/sriharshaedala/financial-fraud-detection-dataset/>

- What kind of AI/ analysis needed?
- How do we explain a flagged transaction?
- How is a person or organization impacted by it?

# Overview: Types of Data

---

- By content structure: Structured, unstructured and semi-structured
- By media: text, audio, visual, multi-media
  
- By source
  - Open data
  - Social data
  - Sensor data
  - Proprietary data
  
- Value is by fusing data across all types
  - sources, content structure and media

# Types of Data - Structured

- The structure of data is fixed. Example: columns in a database
- Benefits
  - Can be stored and queried efficiently, e.g., by commercial databases
  - Easy to analyze, e.g., by SQL or programs – pandas in Python
- Disadvantage
  - Hard to handle data's structural changes. E.g., adding a new column. Complex data migration procedures

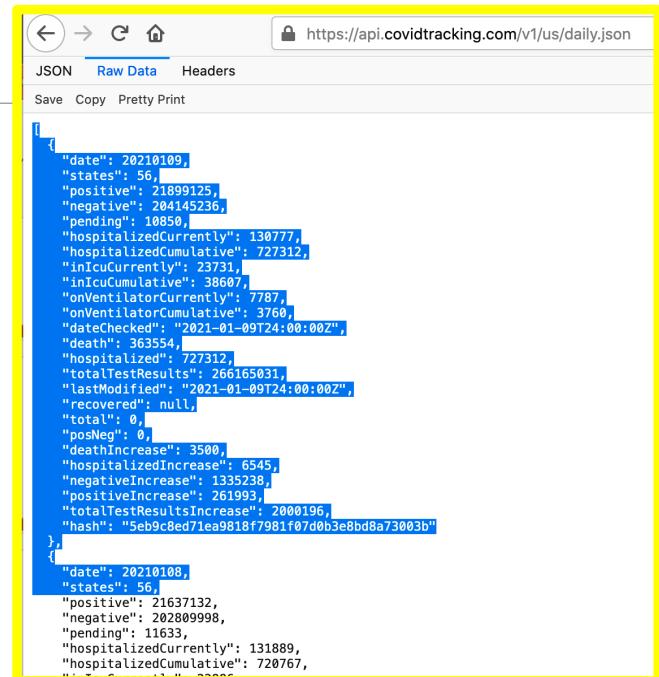

```
country,placename,frequency,start_date,end_date,year,month,week,deaths,expected_deaths,excess_deaths,baseline  
...  
France,,weekly,2020-04-27,2020-05-03,2020,4,18,10498,10357,141,2010-2018 weekly average  
...
```

Source: <https://github.com/nytimes/covid-19-data/tree/master/excess-deaths>

NYT COVID datasets: <https://github.com/nytimes/covid-19-data/>

# Types of Data – Semi-Structured

- The structure of meta-data is fixed, but the structure of data is allowed to change. Example: XML, JSON
- Benefits
  - Relatively easy to analyze, e.g., commands similar to SQL in languages like OQL or Xquery
  - Structure of data easy to extend
- Disadvantage
  - Size of data is larger than structured representation as metadata is added with each record

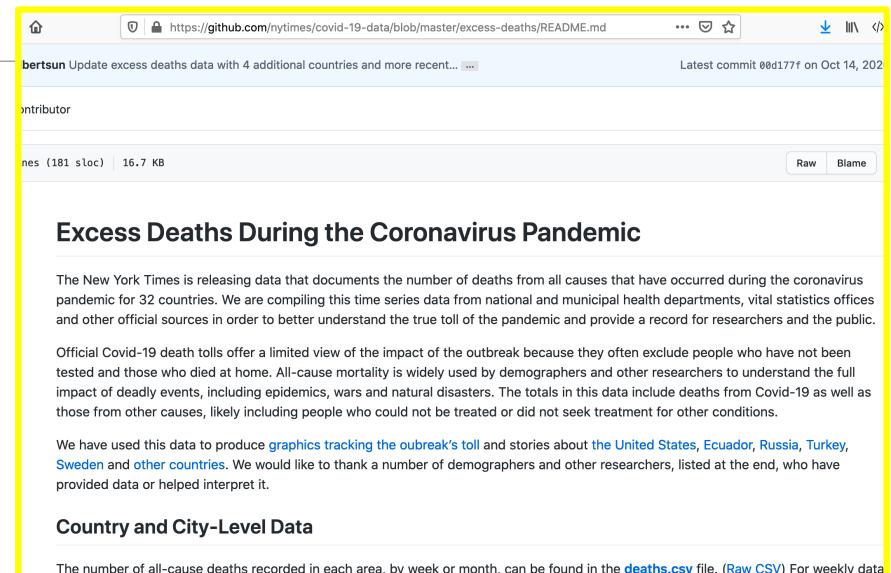

A screenshot of a web browser displaying JSON data from the URL <https://api.covidtracking.com/v1/us/daily.json>. The browser interface includes standard navigation buttons (back, forward, search, home), a URL bar, and tabs for 'JSON', 'Raw Data', and 'Headers'. Below the tabs are buttons for 'Save', 'Copy', and 'Pretty Print'. The main content area shows two JSON objects representing daily COVID-19 data for the US. The first object has a date of 2021-01-09, while the second has a date of 2021-01-08. Both objects contain numerous fields such as 'states', 'positive', 'negative', 'pending', 'hospitalizedCurrently', 'hospitalizedCumulative', 'inIcuCurrently', 'inIcuCumulative', 'onVentilatorCurrently', 'onVentilatorCumulative', 'dateChecked', 'death', 'deathIncrease', 'hospitalizedIncrease', 'negativeIncrease', 'positiveIncrease', 'totalTestResultsIncrease', and a 'hash' field.

```
[{"date": "2021-01-09", "states": 56, "positive": 21899125, "negative": 204145236, "pending": 10850, "hospitalizedCurrently": 130777, "hospitalizedCumulative": 727312, "inIcuCurrently": 23731, "inIcuCumulative": 38607, "onVentilatorCurrently": 7787, "onVentilatorCumulative": 3760, "dateChecked": "2021-01-09T24:00:00Z", "death": 363554, "deathIncrease": 3500, "hospitalized": 727312, "totalTestResults": 266165031, "lastModified": "2021-01-09T24:00:00Z", "recovered": null, "total": 0, "posNeg": 0, "deathIncrease": 3500, "hospitalizedIncrease": 6545, "negativeIncrease": 1335238, "positiveIncrease": 261993, "totalTestResultsIncrease": 2000196, "hash": "5eb9c8ed71ea9818f7981f07d0b3e8bd8a73003b"}, {"date": "2021-01-08", "states": 56, "positive": 21637132, "negative": 202809998, "pending": 11633, "hospitalizedCurrently": 131889, "hospitalizedCumulative": 720767, "inIcuCurrently": 23731, "inIcuCumulative": 38607, "onVentilatorCurrently": 7787, "onVentilatorCumulative": 3760, "dateChecked": "2021-01-08T24:00:00Z", "death": 363554, "deathIncrease": 3500, "hospitalized": 720767, "totalTestResults": 264165031, "lastModified": "2021-01-08T24:00:00Z", "recovered": null, "total": 0, "posNeg": 0, "deathIncrease": 3500, "hospitalizedIncrease": 6545, "negativeIncrease": 1335238, "positiveIncrease": 261993, "totalTestResultsIncrease": 2000196, "hash": "5eb9c8ed71ea9818f7981f07d0b3e8bd8a73003b"}]
```

# Types of Data – Unstructured

- The data has no structure.  
Example: text
- Benefits
  - Easy to change structure
  - Content can be compactly stored
- Disadvantage
  - Hard to analyze content. Example: word analysis, sentiments, topic, ...

# Open Data

---

“Open data and content can be **freely used, modified, and shared by anyone for any purpose**”

<http://opendefinition.org/od/2.1/en/>

# Open Data is an Old Concept in a New Setting

- Open data is the notion that data should not be hidden, but made available to everyone to **reuse**. **The idea is not new.**
- Scientific publications follow this: “standing on the shoulders of giants”
- Data quality and open publishing process is critical

A screenshot of the US Data.gov website. The top navigation bar includes links for DATA, TOPICS, RESOURCES, STRATEGY, DEVELOPERS, and CONTACT. Below the navigation are category icons for Agriculture, Climate, Ecosystems, Energy, Local Government, Maritime, and Ocean. A featured dataset is "Older Adults Health". Below this are two other datasets: "U.S. Hourly Precipitation Data" and "NCDC Storm Events Database". Each dataset has a brief description, a map, and download links (HTML, JSON, KML, etc.).

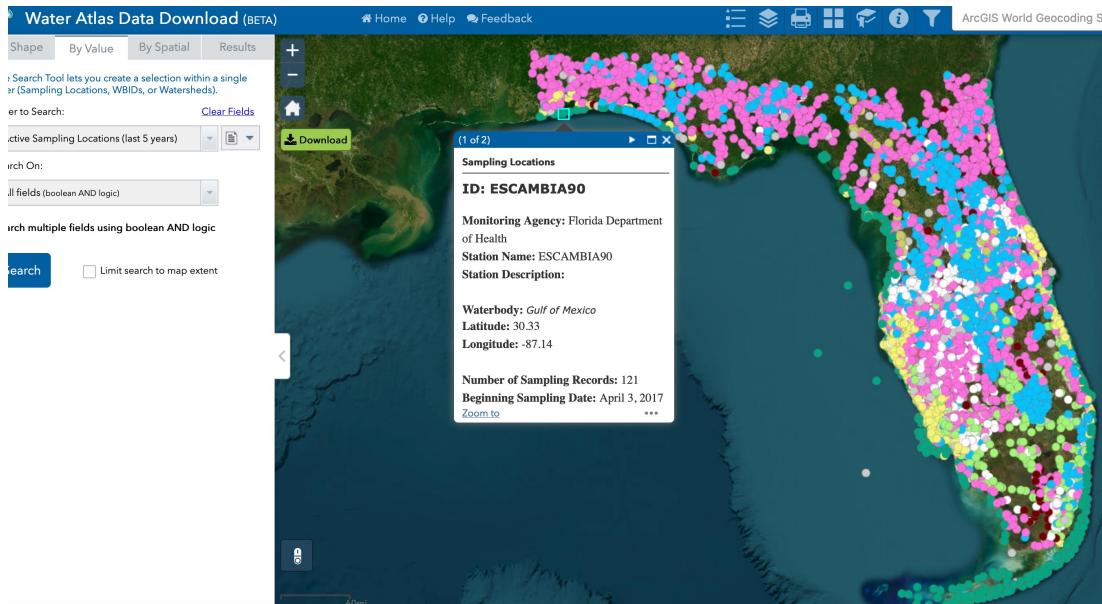

USA

A screenshot of the India data.gov.in website. The top navigation bar includes links for Skip to navigation, Skip to main content, and DataGov States/ULB. The main header features "data.gov.in" and "A Digital India Initiative". A banner highlights "DATASETS FROM HEALTH SECTOR". Below the banner are sections for ANALYTICS (showing 395,534 resources, 8,380 catalogs, 173 departments, etc.), CATALOG (showing various datasets), and INDICATOR DASHBOARD (showing Drinking Water And Sanitation, Health, Transport, and Labour And Employment). A specific dataset titled "Udyog Aadhaar Memorandum (MSME Registration)" is highlighted.

# Chicago: Service Tracking

# Example: Application over Open Data (Chicago)

The screenshot shows a web browser displaying the Chicago 311 Service Tracker website at [servicetracker.cityofchicago.org/requests/13-00210540](http://servicetracker.cityofchicago.org/requests/13-00210540). The page title is "Rodent Baiting / Rat Complaint". Key details include:

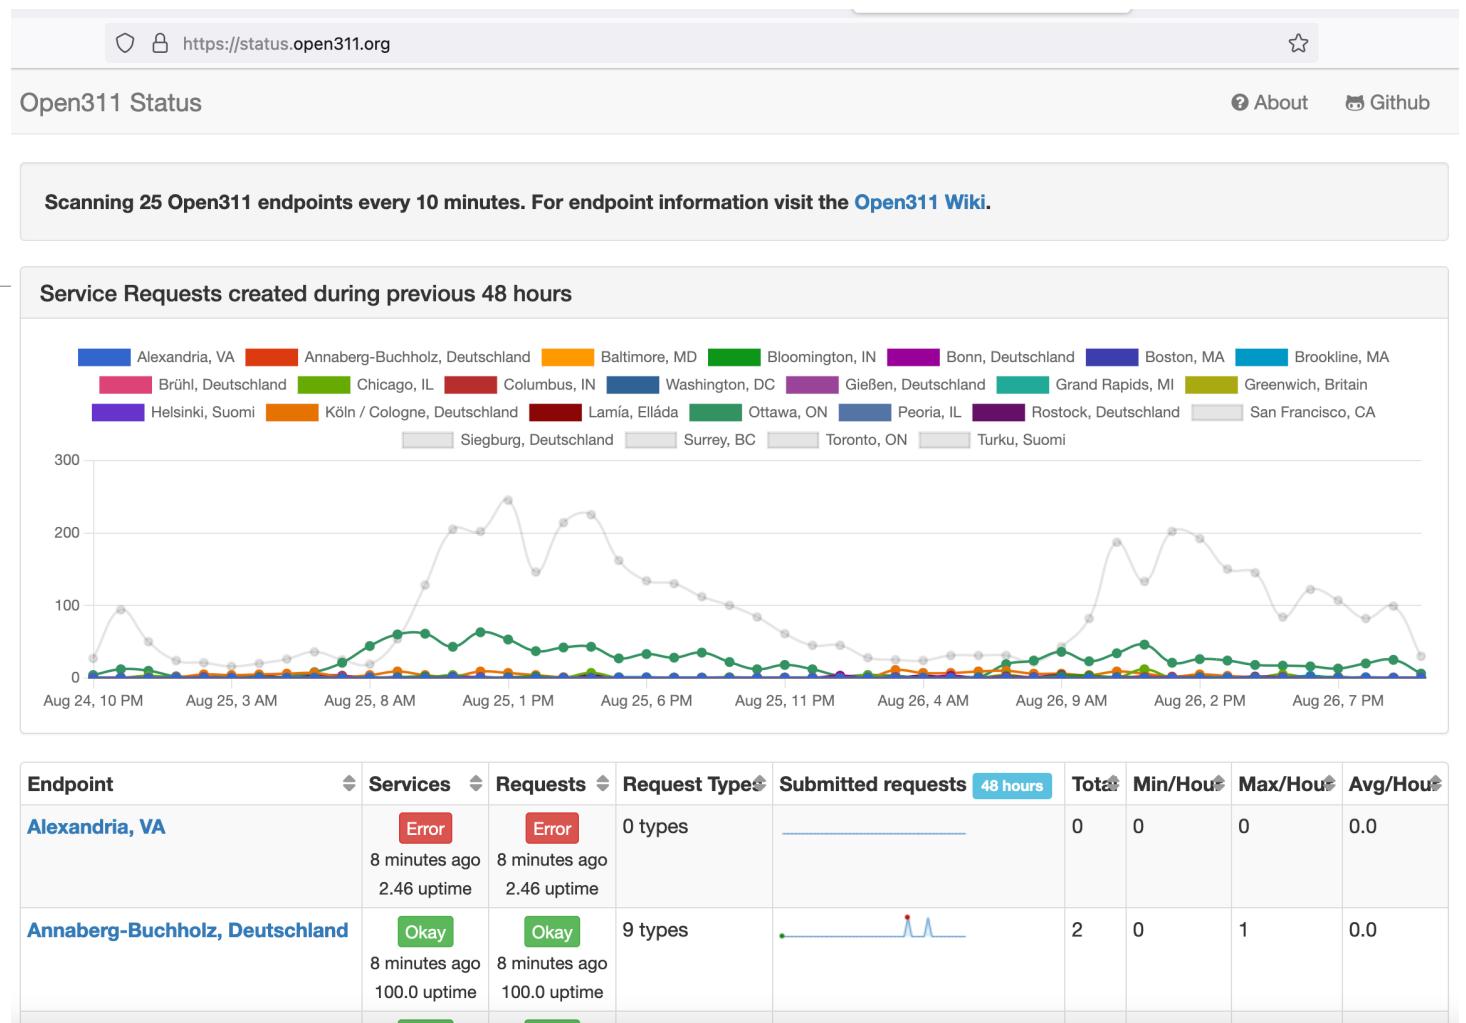

- #13-00210540**
- Address:** 1502 N Wicker Park Ave
- Created:** February 23, 2013
- Received via:** Other
- Status:** Closed (indicated by a green ribbon icon)

The "Activity" section shows the following timeline:

- 05-Mar-2013 10:04 AM: Request closed
- 05-Mar-2013 10:04 AM: Dispatch Crew Completed
- 23-Feb-2013 10:16 PM: Rodent Baiting / Rat Complaint  
Department: Bureau of Rodent Control - S/S  
via Other

# Scaling with Open\_311

<https://status.open311.org/>

# Exercise 2 – Programmatically Access Data

---

1. See sample code on GitHub:

- <https://github.com/biplav-s/course-d2d-ai/blob/main/sample-code/l2-opendata/Explore%20OpenData.ipynb>

2. Explore APIs of another city of your choice

# Exercise 3 – Programmatically Access Data

---

1. Water data
2. Text data

# Helping Publish Good Quality Open Data is Key

Have data policy in place  
 Publish with best practices, have semantics, promote reuse

Figure courtesy: <http://www.w3.org/TR/2015/WD-dwbp-20150625/>

# Data Quality of Public Data in India

## Right to Information

- Not even 1\*
- Information available to requester, but no one else

## Data.gov.in

- 2-3\*
- Available in CSV, etc but not uniquely referenceable

Open data movements are moving to linked data form for semantics

# Annotated – Indian Open Data

---

Vocabulary services: <http://vocab.nic.in/index.php>

- Authoritative
- Standardized codes

Examples

- States in the Union: <http://vocab.nic.in/rest.php/states/json>
- Districts in a state (“UP”): <http://vocab.nic.in/rest.php/district/up/json>
- State legislatures: <http://vocab.nic.in/rest.php/orgn/sg/legislature/json>
- Union government offices in a state (“TN”): <http://vocab.nic.in/rest.php/orgn/ug/state/tn/json>

# Quality of Data in SC

---

- Data
  - <https://sc.gov/data-and-transparency>
  - <https://rfa.sc.gov/data-research/population-demographics/census-state-data-center/housing-units-in-structure-2015-2019>
  - Comment: Lots of pds and reports: combines/ confounds data with presentation
- Quality of data
  - 1-3 star
  - Not easily amenable for analysis

# Project Discussion

---

- Welcome class inputs on individual projects

# Project Discussion

---

- Class inputs requested on individual projects
- Group project (?)
  - Kaggle competition - Google / Kaggle competition around MedGemma launched today -  
<https://www.kaggle.com/competitions/med-gemma-impact-challenge>. Models:  
(<https://huggingface.co/collections/google/health-ai-developer-foundations-hai-def>)

# Trust Scenario

---

Alan – wants to give an entity

What decisions should be made by Alan?

Can AI help Alan make better decisions?

## Candidates

- Want money
  - May be more needy (or effective) than others
  - May be more efficient (less wasteful) than others in using it
- May change behavior after receiving donation
- May use money in different ways than promised

# Projects in Automated Trusted Entity Exchange

- **Actors**

- AA: gives that entity
- BB: deserves a prized entity (e.g., recognition, organ, car, food, ...)
- CC: wants that entity

- **Events:**

- T1 - CC declares their interest in the entity
- T2 - AA gives the entity to BB
- T3 - BB gives the entity away to CC // possibly under duress
- T4 - <You are called to judge actors related to entity exchange>

What if chain of events was done by automated agents or agents + humans?

What behaviors will we be ascribe to various (hybrid) actors?

Ethical Concepts Applied to Actors:

- Awarding or Donating or Gifting or Quid-pro-quo/ Swapping favors (entities) – AA, BB ?
- Deserving – [BB, by axiom], CC ?
- Stealing or Extorting – CC ?
- Entity (Money) Laundering – BB ?
- Bribery – AA, BB, CC ?
- Corruption – AA, BB, CC ?
- ...

# Potential Individual Project

---

- **Individual** - Consider a behavior in entity exchange use case (**Bribery, Donation, Awarding, Corruption, ...**)
  - Formalize the use-case for computational analysis (with actors, events and exchanges)
    - Research humanities on what they mean in law and philosophy
    - Consider typical examples
  - Determine the behavior is legal / illegal, and why
    - Consider multiple regions and settings
  - Given a new situation (data)
    - Process data
    - Determine type of behavior it is
- **Group** – Assemble individual projects into a combined system
  - **Ethical decision making**, for agents and dummies
- Reference:
  - Tackling Corruption With Agents & ICT: A Vision, <https://arxiv.org/abs/1701.06426>, 2016

# Other Ideas

---

- Financial fraud detection in transactional data:

<https://www.kaggle.com/datasets/sriharshaedala/financial-fraud-detection-dataset/>

- How do we explain a flagged transaction?

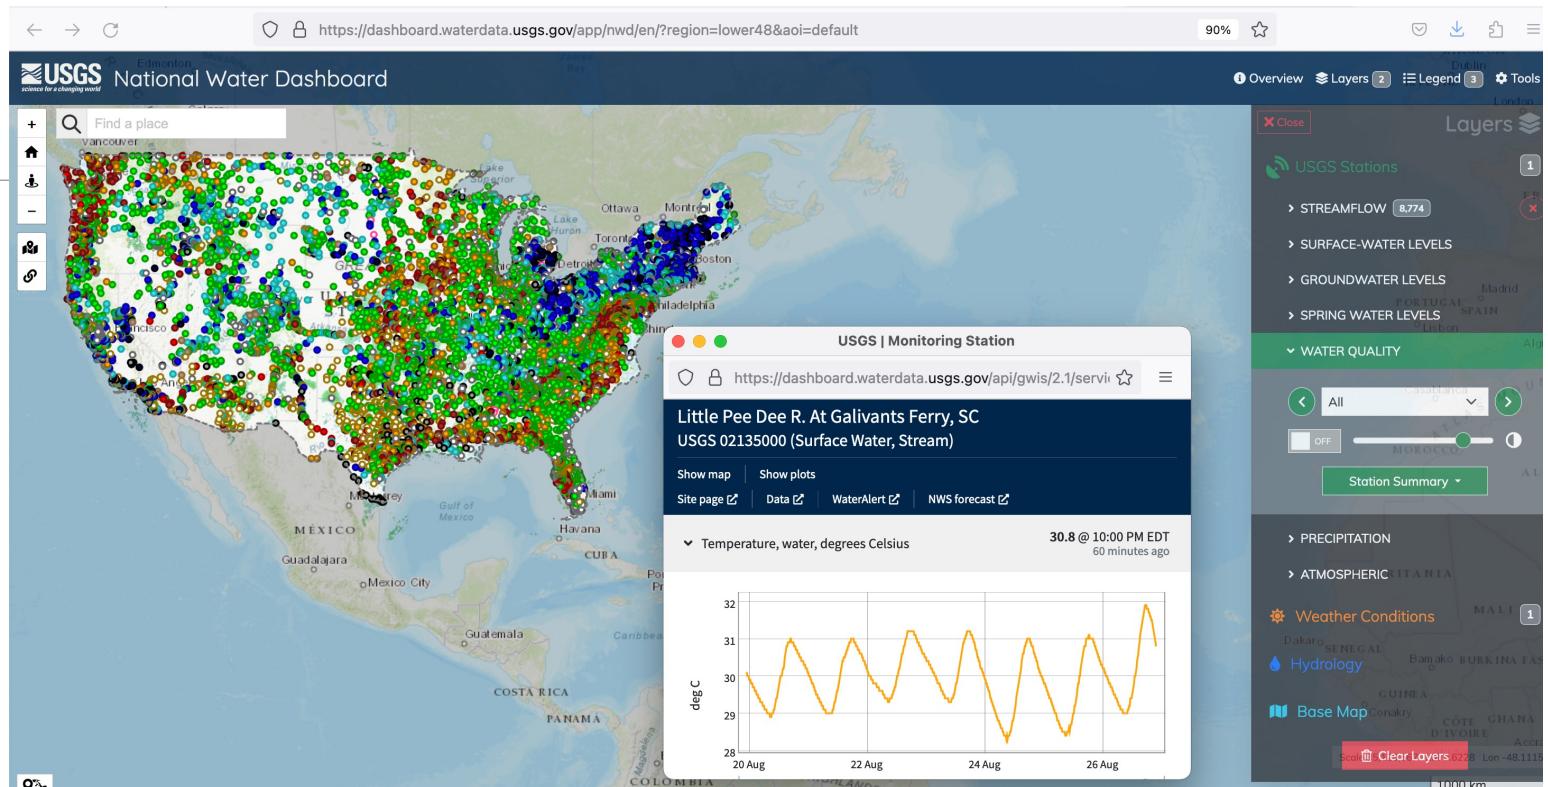

# Week 2, Lecture 4

---

---

# Working With Data – Preparing and Organizing Information

# Water Data

<https://dashboard.waterdata.usgs.gov/app/nwd/en/?region=lower48&aoi=default>

Claims data from 13,000 locations online on 26 Aug 2023

# How Do We Start Working With This?

---

- Access and licensing (Class 3)
- Cleaning, organizing and finding related information (Class 4 – this class)
- Representing formally (in logic) to draw insights (using inferencing) – (Class 4 – this class)

Is this important ? YES !

- Understanding impact of hurricanes
- Planning during regular times – homes, schools, roads; hospital services; electricity, ...
- Economic development

# Common Problem: Missing Value

## • Occurrence

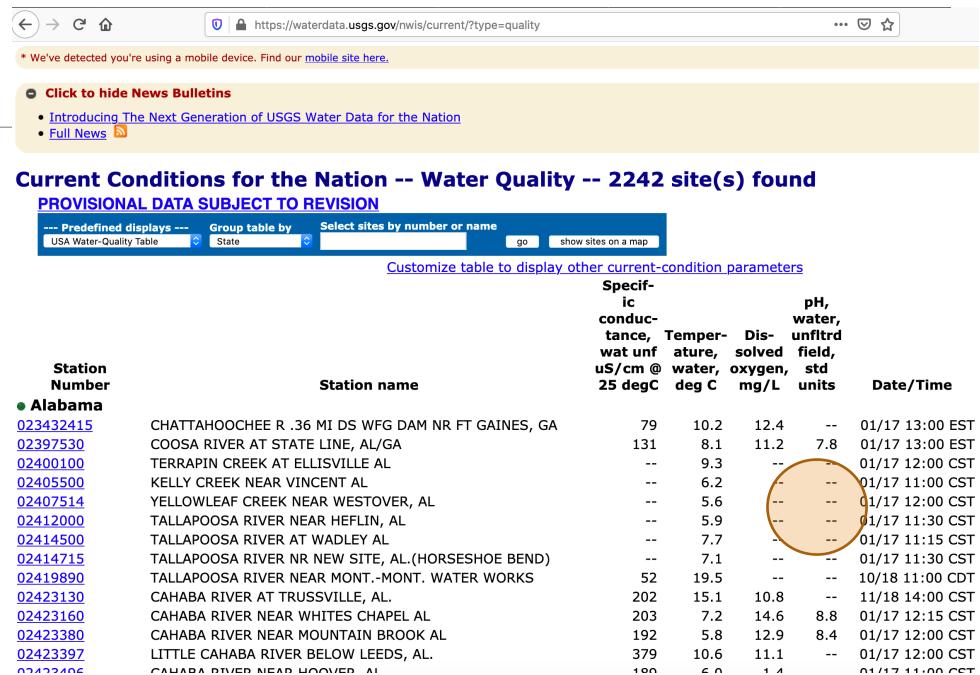

- Missing completely at random
- Missing at random (a group not wanting to participate)
- Missing not at random (a group not able to participate)

## • What does it mean?

- The value was not provided
- The value does not exist or has no practical interpretation
- The value is being hidden (redaction)
- Others: The value is not reliable, ...

## • How to detect it?

- By checking for specific values: NA, Not applicable, out-of-range value, 0, -1, "".

The screenshot shows a web browser displaying the USGS Water Data for the Nation website. The URL is https://waterdata.usgs.gov/nwis/current/?type=quality. The page title is "Current Conditions for the Nation -- Water Quality -- 2242 site(s) found". The main content is a table of water quality data for sites in Alabama. The columns include Station Number, Station name, Specific conductance, Temperature, Dissolved oxygen, pH, and Date/Time. A red circle highlights the Date/Time column for the last row of data.

| Station Number | Station name                                       | Specific conductance<br>25 degC | Temperature<br>wat unf<br>deg C | Dissolved oxygen<br>mg/L | pH, water,<br>uniftrd field,<br>std units | Date/Time       |

# Missing Value – Handling

---

- Ignoring missing value (Omission)
  - Reduces available data
- Impute new value (Imputation)
  - Mean or median
  - Default value
- Analysis techniques which are robust against missing value
  - Expectation maximization

# Code Examples

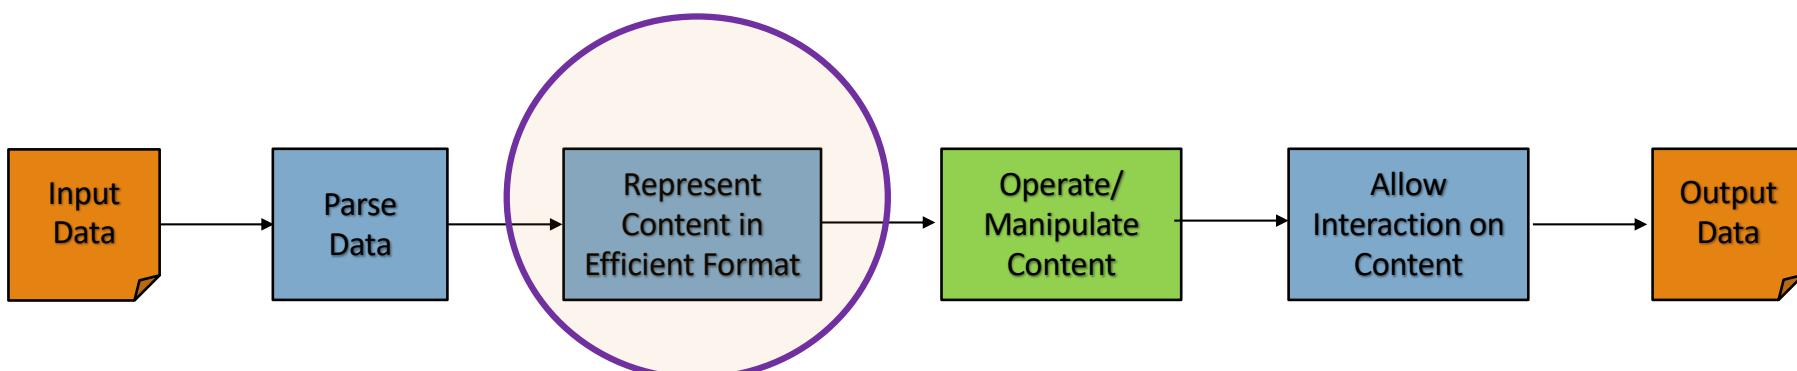

---

<https://github.com/biplav-s/course-d2d-ai/blob/main/sample-code/I5-dataprep/>

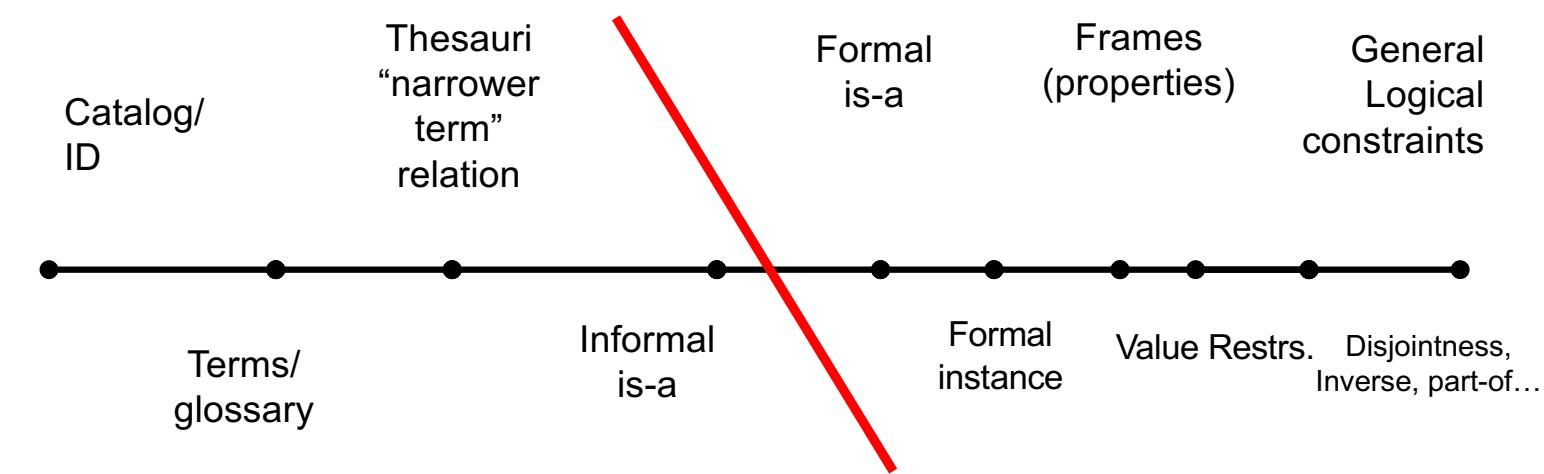

- Basic concepts: **DataPreparation-Numeric.ipynb**
- An illustration: **Clean-RealSample.ipynb**

## Induced Structure

# Schema.org - continued

---

- **Exploration Exercise**

- Services: <https://schema.org/Service>
- Event: <https://schema.org/Event>

- Benefit:

- Easy to incorporate annotations
- Uses popular development tools and technologies (JSON, Microformat)

- Disadvantage

- Cannot perform deep inferencing
- Popular in certain communities

# Formalizing Knowledge in an Ontology

---

## Sources:

Achille Fokoue, Anastasios Kementsietsidis Tutorial

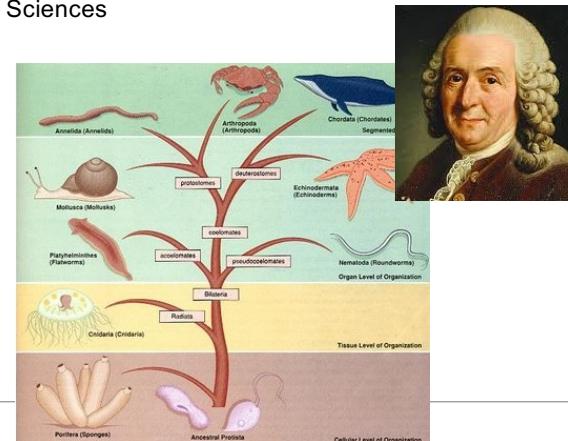

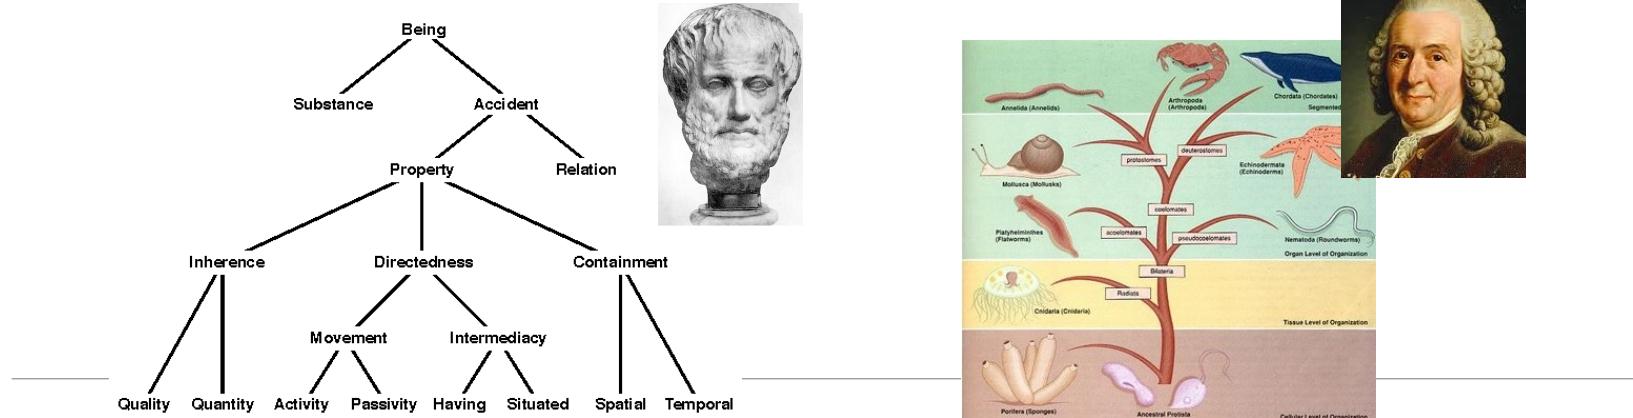

SCRIBE presentation by Rosario Usceda Sosa, Biplav Srivastava, Bob Schloss

- <https://github.com/rschloss/ismp>,
- [https://researcher.watson.ibm.com/researcher/view\\_group.php?id=2505](https://researcher.watson.ibm.com/researcher/view_group.php?id=2505)

## What is an ontology, anyway?

In Computer Science, “An ontology is a formal explicit description of concepts in a domain of discourse (**classes** (sometimes called concepts)), **properties** of each concept describing various features and **attributes** of the concept (slots (sometimes called roles or properties)), and **restrictions** on slots (facets (sometimes called role restrictions)). An ontology together with a set of individual instances of classes constitutes a knowledge base. In reality, there is a fine line where the ontology ends and the knowledge base begins.” [Noy, 2000]

Not to be confused with ontologies (and/or taxonomies) in Philosophy or Life Sciences

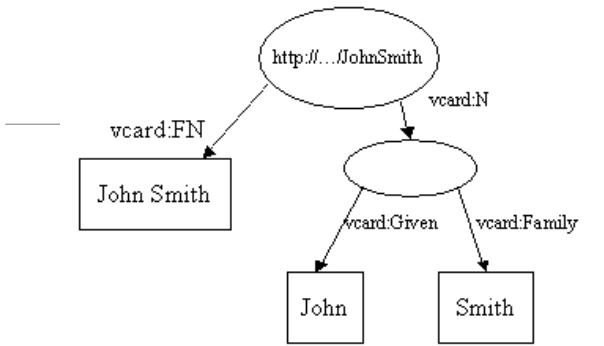

In a Smart City domain, we’re concerned with modeling the *city data* (city activity data, city departments, assets, KPIs), not the city itself (the full set of spatial and temporal relations between people and objects in the city). Ontologies help us to structure and reason about city events, entities and services.

**Ontology = Class + Relations + Constraints**

**Knowledge Base = Ontology + instances + (Standard) Inference and rules**

# RDF / Turtle Example

---- Turtle ----

```
<http://somewhere/JohnSmith>
  <http://www.w3.org/2001/vcard-rdf/3.0#FN>
    "John Smith" ;
  <http://www.w3.org/2001/vcard-rdf/3.0#N>
    [ <http://www.w3.org/2001/vcard-
      rdf/3.0#Family>
        "Smith" ;
      <http://www.w3.org/2001/vcard-
      rdf/3.0#Given>
        "John"
    ] .
```

```
<rdf:RDF
  xmlns:rdf="http://www.w3.org/1999/02/22-rdf-
syntax-ns#"
  xmlns:vcard="http://www.w3.org/2001/vcard-
rdf/3.0#" >
<rdf:Description rdf:nodeID="A0">
  <vcard:Given>John</vcard:Given>
  <vcard:Family>Smith</vcard:Family>
</rdf:Description>
<rdf:Description
  rdf:about="http://somewhere/JohnSmith">
  <vcard:FN>John Smith</vcard:FN>
  <vcard:N rdf:nodeID="A0"/>
</rdf:Description>
</rdf:RDF>
```

# OWL extends RDF...

---

## RDF-schema

- Class, subclass
- Property, subproperty

## + Restrictions

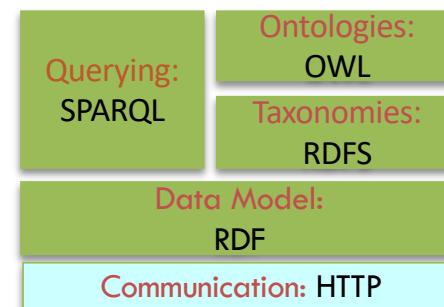

- Range, domain
- Local, global
- Existential
- Cardinality

## + Combinators

- Union, Intersection
- Complement
- Symmetric, transitive

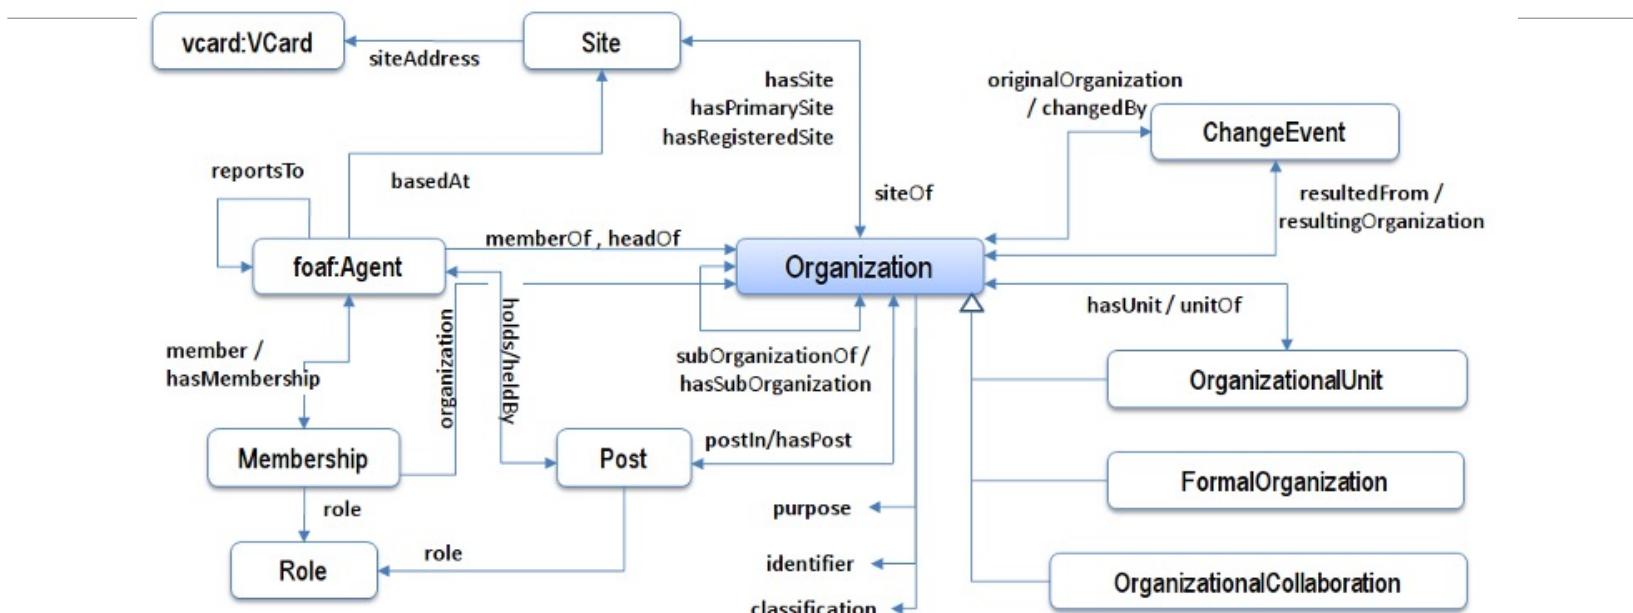

## + Mapping

- Equivalence
- Inverse

# Moving to the future of the web

Semantic Web LayerCake (Berners-Lee, 99; Swartz-Hendler, 2001)

# Challenge of Reasoning on Ontologies

## What makes a good ontology for data integration?

A *good* ontology is a *useful* ontology, an ontology that *both* humans and systems can process.

### Human Usability

**Communicable.** Naming, natural language support, etc.

**Concise.** A simple way to describe the key entities of the model and yet able to infer many facts

**Consistent.** Naming conventions and modeling patterns

**Authoritative** to domain experts

**Documented**, not just descriptions, but also provenance

**Managed and maintained** by people throughout the model lifecycle.

**Reusable** in similar domains, for similar instances.

- ❑ *Formal representation of knowledge in a particular domain*
- ❑ *Formally defines key concepts and relations in the domain*
- ❑ *Specifies relationships between those key concepts and relations*
- ❑ *Supports automated reasoning about entities in the domain*

### System Usability

**Scalable** so large amounts of data can be parsed, stored and retrieved.

**Efficient** query and inferencing

**Programmable** solutions, both in open and closed data paradigms.

**Open** infrastructure and tools

# Using Ontology

---

- Visually via tools like Protégé - <https://protege.stanford.edu/>
- Programmatically with APIs like
  - Jena (Java) - <https://jena.apache.org/documentation/ontology/>
  - OwlReady2 (Python) - <https://bitbucket.org/jibalamy/owlready2/src/master/>
  - Rdflib (Python) - <https://github.com/RDFLib/OWL-RL>
- A compendium of resources - <https://github.com/totogo/awesome-knowledge-graph>

# Code Illustration

---

On Github:

<https://github.com/biplav-s/course-nl/blob/master/l11-ontology/Exploring%20ontologies.ipynb>

# Knowledge Graph

---

- No clear definition
  - ["Towards a Definition of Knowledge Graphs," by Lisa Eherlinger and Wolfram Wöß, CEURWorkshop Proceedings.](#) 2016, <http://ceur-ws.org/Vol-1695/paper4.pdf>
  - For practical purposes, concepts and their relationships; not constraints
  - Driven by applications in search and information integration
  - See discussion at: <http://accidental-taxonomist.blogspot.com/2019/05/knowledge-graphs-and-ontologies.html>
- But ontology as knowledge graph widely used in industries
  - Industry-Scale Knowledge Graphs: Lessons and Challenges, CACM 2019,  
<https://cacm.acm.org/magazines/2019/8/238342-industry-scale-knowledge-graphs/fulltext>

# KG Usage

	<b>Data model</b>	<b>Size of the graph</b>	<b>Development stage</b>
<b>Microsoft</b>	The types of entities, relations, and attributes in the graph are defined in an ontology.	~2 billion primary entities, ~55 billion facts	Actively used in products
<b>Google</b>	Strongly typed entities, relations with domain and range inference	1 billion entities, 70 billion assertions	Actively used in products
<b>Facebook</b>	All of the attributes and relations are structured and strongly typed, and optionally indexed to enable efficient retrieval, search, and traversal.	~50 million primary entities, ~500 million assertions	Actively used in products
<b>eBay</b>	Entities and relation, well-structured and strongly typed	Expect around 100 million products, >1 billion triples	Early stages of development and deployment
<b>IBM</b>	Entities and relations with evidence information associated with them.	Various sizes. Proven on scales documents >100 million, relationships >5 billion, entities >100 million	Actively used in products and by clients

# Concluding Section

---

# Week 2: Concluding Comments

---

- We looked at
  - Trusted decisions
  - Data and characteristics
  - Common ways to prepare data
  - How to organize content for inferencing / reasoning
- Prepares us for understanding trust issues

# About Next Week – Lectures 5, 6

---

# Lecture 5, 6: AI / ML Methods

---

- Common AI methods
- ML landscape
- Supervised ML

1	Jan 14 (Tu)	Introduction, Trusted AI
2	Jan 16 (Th)	Case Studies: Data Analysis for AI, Analysis for Trust [Traffic], Recommendations and Trust [Fairness and ULTRA]
3	Jan 21 (Tu)	Review: Trusted Decisions, Expectations, Course Scope; Data
4	Jan 23 (Th)	AI: Data Prep, Knowledge Graph
5	Jan 28 (Tu)	Common AI methods: ML Landscape
6	Jan 30 (Th)	AI - Structured: Analysis – Supervised ML
7	Feb 4 (Tu)	AI - Structured: Analysis – Supervised ML
8	Feb 6 (Th)	AI - Structured: Analysis – Supervised ML – Trust Issues
9	Feb 11 (Tu)	AI - Structured: Analysis – Supervised ML – Trust Issues
10	Feb 18 (Th)	AI - Structured: Analysis – Supervised ML – Mitigation Methods
11	Feb 18 (Tu)	AI - Supervised ML: Explanation Tools
