Recap from Week 13 (Lectures 25, 26)

- We looked at
 - L25: Human-AI Collaboration, Chatbots
 - L26: Agentic AI, Emerging AI Trust Landscape - Standards, Privacy

Values, Ethics, Law, Decisions (Actions) with Trust

Trust: how can, humans or machines (AI) or in collaboration together, take decisions and actions following the same **values**, **ethical** principles and **laws** ?

Assumption: they should follow same values, principles and laws.

Student Assessment

A = [920-1000]
 B+ = [870-919]
 B = [820-869]
 C+ = [770-819]
 C = [720-769]
 D+ = [670-719]
 D = [600-669]
 F = [0-599]

Tests	Undergrad	Grad
Course Project – report, in-class presentation	600	600

Grades and Attendance Policy

As an in-person class, I will impose a common-sense, **necessary – but not sufficient**, attendance policy for those taking the class for grades.

will be out of 14 classes:

1. 80% or more classes attending: **A, B+ or B**
2. 50-79% classes: **B+, B, C+, C, D+ or D**
3. 49% or below: **F**

Course Project

- **Framework**

1. (Problem) Think of a problem whose solution may benefit people (e.g., health, water, air, traffic, safety)
2. (User) Consider how the primary user (e.g., patient, traveler) may be solving the problem today
3. (AI Method) Think of what the solution will do to help the primary user
 1. Solution => ML task (e.g. classification), recommendation, text summarization, ...
 2. Use a foundation model (e.g., LLM-based) solution as the baseline
4. (Data) Explore the data for a solution to work
5. (Reliability: Testing) Think of the evaluation metric we should employ to establish that the solution will work? (e.g., 20% reduction in patient deaths)
6. (Holding Human Values) Discuss if there are fairness/bias, privacy issues?
7. (Human-AI) Finally, elaborate how you will explain the primary user that your solution is trustable to be used by them

Project Discussion: What to Focus on ?

- Problem: you should care about it
- Data: should be available
- Method: you need to be comfortable with it. Have at least two – one serves as baseline
- Trust issue
 - Due to Users
 - Diverse demographics
 - Diverse abilities
 - Multiple human languages
 - Or other impacts
- What one does to mitigate trust issue

Project Discussion

1. Create a private Github repository called “CSCE581-Spring2026-<studentname>-Repo”. Share with Instructor (biplav-s)
2. Create a folder called “Project”. Inside, create a text file called “ProjectPlan.md” (or “ProjectPlan.txt”) and have details by the next class (Jan 30, 2026)

1. Title:
2. Key idea: (2-3 lines)
3. Who will care when done:
4. Data need:
5. Methods:
6. Evaluation:
7. Users:
8. Trust issue:

<Project Title> - <Your Name>

Project Context

1. Title:
2. Key idea: (2-3 lines)
3. Who will care when done:
4. Data need:
5. Methods:
6. Evaluation:
7. Users:
8. Trust issue:

• Test Case – demonstrate working

- E.g., <input, output, correct output – if different, trust observation>

1 min context, 2 min demo, 1 min expts, 1 min Q/A

<Project Title> - <Your Name>

Format for Final Presentation

Demonstrate effectiveness/ efficiency

- Metrics (F1, running time, ...)
- Empirical results
- Comparison with a LLM (why your method over a general alternative)

Conclusion

- Experience
- Q/A

1 min context, 2 min demo, 1 min expts, 1 min Q/A

Project Report

- Due by Tuesday, April 30, 2026
- Will contain:
 - Project context
 - Demonstration, including trust aspect. Potentially link to a video.
 - Experimental results: effectiveness, efficiency dimensions
 - **Related work (what most relevant prior work is out there)**
 - **Discussion: experience and how it may be extended**
 - Conclusion
